Finance & Strategy | M&A Due Diligence | Startups | AI Automation
Lisboa e Região

Resumo

I began my career in finance because I wanted to understand how businesses truly work — how value is created, how companies grow, how risks appear, and how strategic decisions are made. That path led me to a Bachelor's in Economics at ISEG, a Master's in Finance at ISCTE Business School, and later to EY Strategy & Transactions, where I worked in Transaction Due Diligence. In that role, I analyzed companies' financial health, risks, performance and business dynamics in M&A contexts, developing a strong foundation in financial analysis, market research, due diligence, business strategy and investment decision-making. Over time, my curiosity started moving beyond finance alone. I became increasingly interested in how technology, data and Artificial Intelligence can transform the way businesses operate, grow and make decisions. That interest led me to 42 Lisboa, where I am currently developing my software engineering foundations through a project-based curriculum focused on programming, problem-solving, algorithms and systems thinking. Alongside this transition, I have been building entrepreneurial projects that allow me to apply finance, strategy and technology in real business contexts. Through projects such as Vektrum, RIVIA, Oeiras360 and Petabook, I have explored areas including AI automation, e-commerce, local media, pet-tech, digital operations, growth, product development and business building. These projects have given me a more practical understanding of what it means to create something from zero: identifying opportunities, validating ideas, building systems, understanding users, improving operations and thinking commercially about growth. My academic and professional path has also been shaped by international experiences in Germany, Thailand, Singapore and the USA, which strengthened my global perspective and my interest in markets, entrepreneurship and innovation. Today, I position myself at the intersection of finance, strategy, technology and entrepreneurship. I bring the analytical discipline of finance, the business perspective of M&A and consulting, and the technical curiosity to build, automate and improve

systems. I am especially interested in opportunities connected to startups, business development, growth, investor relations, strategy, financial analysis, data, AI automation and technology-driven operations. At the core, I am driven by a simple idea: to keep learning, keep building, and contribute to projects where business, technology and human progress meet.

Experiência

EY

Strategy and Transactions Consultant at EY

setembro de 2023 - agosto de 2025 (2 anos)

Lisboa, Portugal

Salesland

Brand Ambassador

agosto de 2022 - agosto de 2022 (1 mês)
